

KANCHI RAJPUT

Los Angeles, California | +1 (213) 414 9521 | kanchira@usc.edu | kanchirajput26.github.io/portfolio | linkedin.com/in/kanchirajput/

SUMMARY

Engineering Management graduate student at USC with a strong interest in product and project management, focused on bringing structure to complex problems and improving how systems operate. Experienced in building automated workflows, defining project roadmaps, and using data to drive decisions and improve operational outcomes. Adept at bridging technical execution with business needs, with a growing interest in leveraging AI and automation to build scalable solutions.

SKILLS

- **Automation & Data Analytics:** Google Apps Script, SQL, Python, JavaScript, Power BI, Tableau, Google Analytics
- **Process & Project Management:** Agile, Scrum, Jira, Trello, MS Project, Gantt Charts, WBS, NPV Analysis, Budget Tracking, Vendor Coordination
- **Tools & Platforms:** Google Sheets, Excel, Microsoft Office Suite, Slack, Zendesk, Figma, Canva, AWS, Azure, GCP, Lucidchart, Miro, Visio, AutoCAD

EXPERIENCE

- Flowchart Monitoring System and Checklists, Robot Components Private Limited** **Faridabad, India**
MIS Intern (Excel, Google Workspace, Javascript) **June 2025 - July 2025**
- Analyzed internal workflows across multiple business functions to identify process bottlenecks, improving visibility into task ownership and execution timelines.
 - Designed and implemented automated workflow tracking systems using Google Apps Script, improving real-time visibility into task progress and team coordination.
 - Implemented alert-based escalation mechanisms for delayed tasks, improving accountability and reducing turnaround delays.
 - Streamlined dispatch and procurement operations by introducing automated checklists and deadline tracking, enhancing operational efficiency.
 - Generated and analyzed MIS reports to track employee KPIs on a weekly and monthly basis, enabling data-driven decision-making for management.
 - Explored AI tools to support rapid prototyping and improve efficiency in process optimization tasks.

ACADEMIC PROJECT

- USC Housing Mobile Application – Project Planning & Organizational Change Management (Group Project)** **Los Angeles, USA**
University of Southern California | ISE 515 – Engineering Project Management (MS Project) **October 2025 - December 2025**
- Led project planning and scheduling for a large-scale mobile application initiative, developing a structured roadmap spanning 22+ months.
 - Designed and optimized a 7-phase project lifecycle including initiation, planning, system development, testing, deployment, adoption, and maintenance with clearly defined timelines.
 - Built resource allocation models by translating generic roles into industry-aligned positions (Associate PM, UX/UI Designer, Full-Stack Developer, DevOps, QA, and Support).
 - Established critical path logic by tightening task dependencies and sequencing, enabling improved timeline visibility and risk control.
 - Defined and tracked project health milestones including charter approval, MVP completion, beta release, system go-live, and adoption targets.
 - Developed a comprehensive Organizational Change Management (OCM) strategy using the ADKAR framework, focusing on student adoption, stakeholder engagement, training, and long-term behavioural change.
 - Improved project timeline clarity and risk visibility by optimizing task dependencies and identifying critical path activities.

EDUCATION

- University of Southern California, Viterbi School of Engineering** **Los Angeles, US**
Master of Science in Engineering Management | GPA - 3.57/4.00 **August 2025 - December 2026**
- Shiv Nadar Institute of Eminence** **Uttar Pradesh, India**
Bachelor of Technology in Electronics Engineering - Major **August 2020 - May 2024**
Bachelor of Management - Minor
